

ALUMINIUM STRUCTURE

SOME EXAMBLES OF AVAILABLE RAL COLOURS FOR ALUMINIUM FRAME FINISHES

The manufacturing is splitted in two main processes:

- The pretreatment is made in six different stages by full immersion in alkaline and acid chemical solution, with ending treatment by organic salts and final drying.
- Lacquering by eletrostatic polyester powder (Qualicoat certificate).

The whole process is related only to the colours white + graphite + grinz ivory.

All our frames can be custom painted RAL or Bronze anodized.
